

Q: Can I use my iPod to listen to downloadable audiobooks?

A: Sadly, no. Downloadable audiobooks borrowed from the library cannot be used with iPods. They can only be used with MP3 players that support the .WMA format.

Although this is unfortunate, there is a good reason for it. iPods use the .AAC file format, which does not support Digital Rights Management technology.

Digital Rights Management allows checked-out items to expire on the due date. This is necessary in order to protect the copyright rights of the companies that provide downloadable audiobooks to libraries, since items are borrowed by users, rather than purchased.
